Important Notes

Quality Assurance (QA):

Due to limited resources and time constraints, Release 5.0 has not been tested as extensively as is standard for KC. QA will continue over the next few weeks, and a patch will be provided for the most critical fixes.

Proposal Development and Grants.gov: KC is in the process of deprecating YNQ and migrating to questionnaire. This is being done in stages:

- Stage 1 is in 5.0. The use of YNQ for S2S form data population in the Proposal Development module has been depreciated in this release. The information gathering required for S2S form mapping has been relocated to a Questionnaire to relieve proposal users from answering *all* the YNQs for *all* proposals. Thus, previously distributed YNQ questions can be marked as Inactive in your local instances. Members may opt to use the Questionnaire to present local questions, or continue to use the YNQ Proposal questions specifically for local questions that must be answered for every proposal.

- Stage 2 will be coming soon and include only presenting specific questions based on the project details using KRMS.

IACUC: This release contains the first iteration of the Institutional Animal Care and Use Committee (IACUC) module. The IACUC module is not complete in Release 5.0 and will be completed in Release 5.1. Initial IACUC components include:

- All standard protocol data entry available in IRB protocol including questionnaire integration, notes and attachments, custom data, special review, permissions.
- Initial print functionality
- IACUC specific data elements except for the initial procedure panel overview and description (Significant additional changes are coming in 5.0.1/5.1 for this.)
- Online review integration
- Committee integration: ability to create/maintain an IACUC committee, membership, schedule
- Initial submission action, review type recommendation, committee-schedule-reviewer assignment
- Withdraw, delete, modify submission, assign committee actions
- Initial notifications

IACUC development for 5.1 includes the remaining actions (all approvals, table, abandon, notify, hold, lift hold, suspend etc.), completed procedures panel, completed printing/correspondence, remaining notifications, and the summary & History panel.

What's New in This Release?

Integration with Rice 2.1:

KC Release 5.0 included an upgrade of Rice to version 2.1. Release 5.0 utilizes new Rice services including:

- Kuali Rules Management System (KRMS)

- New Kuali Enterprise Workflow (KEW) features such as Recall from Routing, Super User actions panel, and People Flow

- Rice client-server version compatibility – any standalone Rice 2 server will be compatible with client applications running older Rice 2 versions

New functionality:

COI Module:
Release 5.0 includes the first version of the Conflict of Interest (COI) Module. The current release allows a reporter to:
- Create and edit financial entities.
- Create annual and manual disclosures
- Complete project-based disclosures
- Complete non project related disclosures such as travel/speaking engagements etc.
- Certify and submit disclosures for review and approval
- View and update master disclosures

The current release allows Compliance staff to:

- Track disclosures
- Assign COI reviewers
- Review and perform COI administrative actions
- Manage notifications
- Customize the data entry requirements for financial entities
- Create custom questions and questionnaires using branching logic
- Create and customize disclosure types, their required fields and labels and associate specific questionnaires to that disclosure type.
- View a reporter's disclosure history in a master list and project details of each approved disclosure.
- View financial entity history and highlighted differences

Subaward: Includes the ability to maintain subawards, track subaward invoices and view outgoing subaward data from any award that is a funding source for the subaward. Future functionality will include the ability to generate subaward agreement documents from uploaded templates.

Negotiations: Allows the Sponsored Programs office to track negotiations for individual proposals. It provides administrators with tools to keep notes and track the progress of the negotiation, facilitates sharing of electronic files, and generates status reports for negotiations.

Report Tracking: Allows an institution to track due date and maintain the report status for required reports for an award.

Fixes and Enhancements:

Release 5.0 includes the following fixes and enhancements to existing modules:
